twentieth

Surface Table - Limited Edition

Established & Sons

DESCRIPTION

Fusing advanced engineering and artful design, the Surface Table is the result of a pioneering collaboration between furniture designer Terence Woodgate and Formula One engineer John Barnard. The super-slim carbon fiber composite table—one of only 20 ever made—spans almost 20 feet in length with an edge thickness of 1/8” that visually defies what is possible. Radius corners, round legs, domed feet and rounded edges accentuate the elegance of the design.

Twentieth is proud to present this table for the first time in North America. Please contact one of our sales associates for more information.
