Platto Table

Christopher Boots

DESCRIPTION

PLATTO is a simple yet innovative side table, crafted from repurposed waste materials from the production floor to create a unique hallmark terrazzo.

Inspired by the desire to design a signature terrazzo, PLATTO utilises materials typically sent offsite to landfill or recycling. Composed of a blend of brass and crystal offcuts, meticulously hand-set into green Jesmonite, PLATTO features three terrazzo parts slot together with gravity, forming a self-supporting, flat-pack table.

The entire process, from casting the ingredients into three moulds to assembly, produces zero waste.
