twentieth

Museum Glass Bench

Christopher Kreiling

DESCRIPTION

The Museum Glass Bench in annealed glass and steel was originally envisioned to be placed near art, as not to obstruct the view, yet allow one a place to sit and contemplate the work. It’s made of commercial grade glass pipes and solid steel and is strong enough to hold up to 250 lbs. The steel has a blackened patina that reads like a dark graphite grey in bright light and then coated with a matte finish to protect it from rust. This heavy industrial, minimal modern piece is a real conversation starter.

ADDITIONAL INFORMATION

DIMENSIONS
60″ W x 19″ D x 18″ H

MATERIALS
Patinated Steel, Molded Glass Tubes

VARIATIONS
Patinated Steel or Polished Stainless Steel
Customizable width up to 10"
