84/84V Stem

Bocci

DESCRIPTION

84 SERIES

A white glass moll is captured inside a fine copper mesh basket and then plunged into hot clear glass. Air is blown into the matrix to gently push the white glass through the mesh, creating a delicate pillowed form that is suspended inside the thick outer layer of clear glass. Sometimes the copper mesh basket folds and crinkles, adding specificity to each piece. Undulations in the exterior shape are a natural consequence of the fabrication process and accentuate the gentle white pillowing below. A low-voltage xenon or LED light source is introduced into the piece, casting a warm coppery hue.

84/84V STEM

The 84 solid brass stem system is available in unlacquered brass or powder coated black with a variety of applications. The system allows for floor, ceiling-mounted, or columnar installation. Floor and column versions
