19.2 Overspill Brass Vessel

Bocci

DESCRIPTION

An exploration of sand casting technique where a generous and unpredictable overspill is encouraged at the rim of each piece, making each completely unique from any other ever made. The overspill oxidizes instantly, producing a highly textured surface that stands in contrast to the interior of the piece, which is hand-polished to a near mirror finish.

Made of recycled brass in East Vancouver at the oldest foundry on the West Coast of Canada
