twentieth

Stepped Fire Table

James De Wulf

DESCRIPTION

In?uenced by the geometry of Carlo Scarpa, the Stepped Fire Table sits in graduated circles from a top diameter of 48" and is polished and sealed for a soft luster. An ethanol burning kit* sits in lava rock, topped with high grade black glass rock. The Stepped Fire Table is an elegant display of symmetry of form and grounded balance.

*Fire Table Burner information:
The unit is suitable for outdoor as well as well-ventilated indoor placement. The bio-ethanol burner kit is a can which holds bio-ethanol fuel, lit directly at the top of the can. Bioethanol burns smokeless like a candle; emitting heat, steam, and carbon dioxide. The ?ame burns 6000 BTU's over an 11-hr burn time at its standard tank size. Please inquire about gas / propane line customization.
