

WRAP LIGHT

Installation Instructions

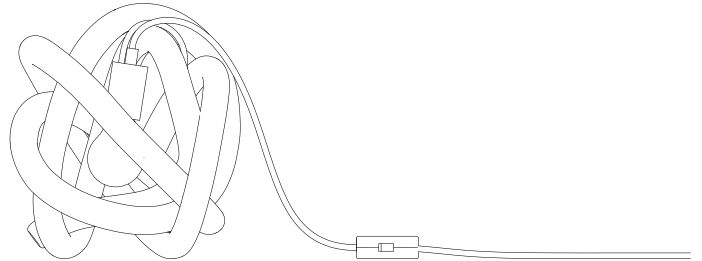

WRAP LIGHT

Congratulations on your purchase of a SkLO Wrap Light. This product must be installed in accordance with the applicable codes. Use a maximum 60W bulb.

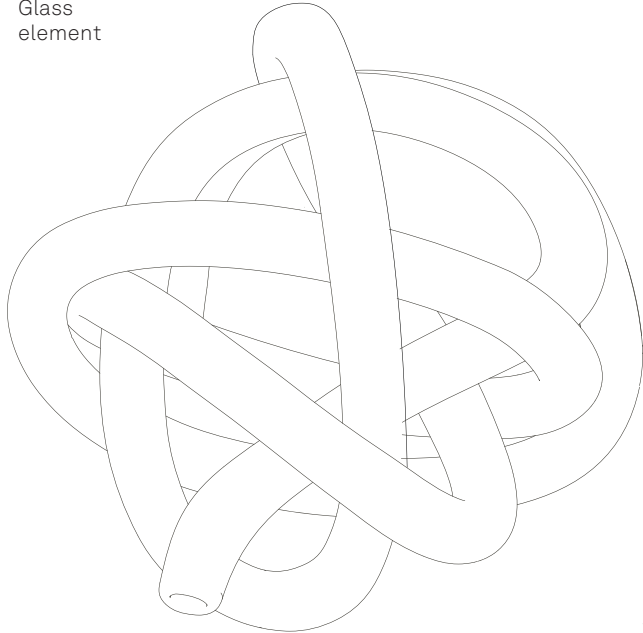

When unpacking individual items and parts of the light fixture, make sure to lay them out on a protective surface that will neither mar the delicate metal finishes nor scratch the glass. Gloves (nitrile) are provided and must be worn during installation to avoid fingerprints on the finish of the exposed metal parts.

Your SkLO fixture will arrive with the hand-blown glass elements packed separately from the light fixture itself.

1x

1. Carefully unwrap the brass electrical assembly. The brass electrical assembly has a threaded socket with a hook and a fabric-wrapped electrical cord with in-line on/off switch and plug.
2. Install the supplied LED light bulb (60W Max) into the socket (Figure 1).
3. Set the glass Wrap element in the desired location and orientation. Set the hook attached to the socket over the glass so that the light bulb hangs within the Wrap. Note that each glass Wrap element is handblown and that no two are exactly alike – you may need to adjust the position of the Wrap to find the best fit for the hook and light bulb (Figure 2).
4. Plug in.
